

Dear Hiring Manager,

I am writing to express my interest in the Web Developer position at Ramsalt Lab. I have been working as a full-stack web developer for more than three years and have extensively used HTML, CSS, JavaScript, and WordPress to develop user friendly websites. On the backend, I have experience with PHP and MySQL. In addition, I have also worked with Bootstrap and Laravel frameworks in my work and I have basic understanding of React framework. I am interested in applying for this position, as I believe my interests, skills, and experience align very well with the requirements of the position.

In my most recent position at Digi Publishing, Trondheim, I am developing a customizable application for taking bookings to rent products such as vehicles. The application will significantly increase productivity by eliminating the redundant development tasks that our team used to do earlier. I have included a link to it in the CV. I have also developed several user-friendly websites and one of them, link in my CV, earned us many landing pages from the client.

I have worked closely with the web design teams not only to implement the designs but also to give feedback on improving design itself. For example, in my previous position at Globuzzer, Stockholm, I provided critical feedback on their website, based on which they decided to redesign the website. I worked closely with the design team on the new design and we developed a website for easy navigation, clear identity, and responsiveness.

I am a very self-disciplined person. At Globuzzer, I worked remotely from a different town. However, I always communicated very well with my team over different mediums such as Slack and Skype. I managed my time myself and I was as productive as any other team member working from office.

To keep up to date with latest technology trends, I did Udacity's three-month course on Front-end Web Development for which I received Google Developer Challenge Scholarship. This course proved to be a great learning experience and laid down a strong foundation for an exciting career in front end web development. Earlier, I received my undergraduate and master's degree in computer science.

I am always excited to learn new technologies. I believe working on multiple different products and projects at Ramsalt Lab will be a great learning experience and a big step towards a successful career.

I look forward to hearing from you.
